

TSS Switch2 Access Control System

A standalone solution, which uses a separate control unit for higher security. The Switch2 control unit is housed on the inside or safe side of the door. The control unit is used in conjunction with an Access reader or keypad. This provides higher security than a compact system. Switch2 is the standalone solution for external and higher security internal doors.

Switch2 systems are available with a choice of PROXIMITY or CARDLOCK (magstripe) readers or TOUCHLOCK keypads. Switch2 has a larger range of compatible readers than Compact and may also be used with a combined keypad/proximity reader. Access is gained by using a code or PIN with a keypad, or by presenting a valid token to readers. Simple token management using our token packs makes administration straightforward.

Switch2 systems can be fitted to one or many doors in a building. Additional doors may be added as required.

If you are choosing a standalone system but may want to upgrade to a PC based system in the future, Switch2 is the right choice. Only the control unit would need to be replaced. Readers and other hardware are compatible with both systems.

Key features

- 10,000 users (PROXIMITY & CARDLOCK), up to 50 codes (TOUCHLOCK)
- Separate control unit and reader (high security)
- Simple token management
- Scalable; systems can be added to easily
