

# ACCESS CONTROL SYSTEMS

## Product Specification Sheet

We design systems to make your property more secure without adding inconvenience. Systems can be installed to a single door to restrict access to just approved personnel or they can be complex systems that is computer network based and operates a 100 doors. The system can be programmed in detail to give different people different rights of access eg. the company MD has access to all doors; the accountant staff have access to the main entrance door, the accounts department and the cafeteria; The cleaners have access to general office areas but only between certain times. This level of control enables everyone to go about their business without hindrance whilst still ensuring they only go where they are supposed to. For additional convenience Hands Free readers can be installed which automatically open the door (if access is allowed) as the person approaches so staff can still carry files etc. without having to fiddle about trying to find their Access Card.

**Swipe Card Operated**

**Key Pad Release**

**Finger Print release**

At TSS you can trust that we will meet your needs as we specialise in all areas of security, with our personal touch one of our surveyors will attend your premises and advice which product will work best for you and your business needs.
